1986 CENSUS OF CANADA FINAL POPULATION AND DWELLING COUNTS

INTRODUCTION

This set of tabulations presents final population and dwelling counts from the 1986 Census of Canada.

Some dwelling and population counts are incomplete because enumeration on a number of Indian reserves and settlements was either not permitted or was interrupted. This problem is discussed more fully in the SPECIAL NOTES section.

DESCRIPTION OF THE TABLES

This package is composed of five tables, each of which contains the following data: (1) final counts of the total population from the 1981 Census, adjusted where applicable to reflect the geographic boundaries of the 1986 Census; (2) final counts of the total population from the 1986 Census; (3) percentage change in population between 1981 and 1986; and (4) final counts of occupied private dwellings from the 1986 Census. Each table presents these counts for a different type of geographic area.

TABLE 1 shows Canada, the provinces and territories. TABLE 2 presents census metropolitan areas across Canada, while TABLE 3 shows Canada's census agglomerations. TABLE 4 summarizes the census divisions, reporting them in alphabetical order by province or territory. TABLE 5 reports census subdivisions in alphabetical order by census division which, in turn, are reported in alphabetical order by province or territory.

DEFINITIONS of the concepts and of the geographic areas mentioned above, as well as SPECIAL NOTES concerning the population and dwelling data, are presented below.

DEFINITIONS

The definitions of dwelling concepts and geographic areas are presented here in summary form only. Users should refer to the **1986 Census Dictionary** (Catalogue No. 99-101E or F) for the full definitions and additional remarks related to these concepts and areas.

CENSUS AGGLOMERATION (CA)

The general concept of a census agglomeration (CA) is one of a large urbanized core, together with adjacent urban and rural areas which have a high degree of economic and social integration with that core.

A CA is defined as the main labour market area of an urban area (the urbanized core) of at least 10,000 population, based on the previous census. Once a CA attains an urbanized core population of at least 100,000, based on the previous census, it becomes a census metropolitan area (CMA).

CAs are comprised of one or more census subdivisions (CSDs) which meet at least one of the following criteria:

- (1) the CSD falls completely or partly inside the urbanized core;
- (2) at least 50% of the employed labour force living in the CSD works in the urbanized core; or
- (3) at least 25% of the employed labour force working in the CSD lives in the urbanized core.

Exceptions to the above delineation criteria may occasionally be made in certain special situations.

Users should be aware that CA boundaries may not conform precisely with the main labour market area, since CAs must respect CSD limits.

CENSUS DIVISION (CD)

Refers to the general term applying to divisions, counties, regional districts, regional municipalities, and five other types of geographic areas made up of groups of census subdivisions.

In Newfoundland, Manitoba, Saskatchewan and Alberta, provincial law does not provide for geographic areas which are intermediate between the census subdivision and the province. Therefore, census divisions have been created by Statistics Canada in co-operation with the provinces. In all other provinces, the different types of census divisions and their boundaries are established by provincial law.

CENSUS METROPOLITAN AREA (CMA)

The general concept of a census metropolitan area (CMA) is one of a very large urbanized core, together with adjacent urban and rural areas which have a high degree of economic and social integration with that core.

A CMA is defined as the main labour market area of an urban area (the urbanized core) of at least 100,000 population, based on the previous census. Once an area becomes a CMA, it is retained in the program even if its population subsequently declines.

Smaller labour market areas, centred on urbanized cores of at least 10,000 population, are included in the census agglomeration (CA) program.

CMAs comprise one or more census subdivisions (CSDs) which meet at least one of the following criteria:

- (1) the CSD falls completely or partly inside the urbanized core;
- (2) at least 50% of the employed labour force living in the CSD works in the urbanized core; or
- (3) at least 25% of the employed labour force working in the CSD lives in the urbanized core.

Exceptions to the above delineation criteria occasionally can be made in certain special situations.

Users should be aware that CMA boundaries may not conform precisely with the main labour market area, since CMAs must respect CSD boundaries. CMAs may also differ from metropolitan areas designated by local authorities for planning or other purposes.

CENSUS SUBDIVISION (CSD)

Refers to the general term applying to municipalities, Indian reserves, Indian settlements or unorganized territories.

In Newfoundland, Nova Scotia and British Columbia, the term also describes geostatistical areas that have been created by Statistics Canada in co-operation with the provinces as equivalents for municipalities.

CENSUS SUBDIVISION TYPE

Census subdivisions (CSDs) are classified into various types, according to official designations adopted by provincial and federal authorities. With the exception of unorganized territories, Indian reserves and Indian settlements, hamlets in the Northwest Territories and settlements in the Yukon Territory, the type indicates the municipal status of a CSD. The following list indicates the abbreviations used for the most common CSD types:

BOR	Borough
C	City - Cité
CM	County (Municipality)
COM	Community
CT	Canton (Municipalité de)
CU	Cantons unis (Municipalité de)
DM	District (Municipality)
HAM	Hamlet
ID	Improvement District
LGD	Local Government District
LOT	Township and Royalty
MD	Municipal District
NH	Northern Hamlet
NV	Northern Village
P	Paroisse (Municipalité de)
PAR	Parish
R	Indian Reserve - Réserve indienne
RM	Rural Municipality
RV	Resort Village
SA	Special Area
SCM	Subdivision of County Municipality
SD	Sans désignation (Municipalité)
S-E	Indian Settlement - Établissement indien
SET	Settlement
SRD	Subdivision of Regional District
SUN	Subdivision of Unorganized
SV	Summer Village
T	Town
TP	Township
UNO	Unorganized - Non organisé
V	Ville
VC	Village Cri
VK	Village Naskapi
VL	Village
VN	Village Nordique

CENSUS TRACT (CT)

Refers to a permanent small census geostatistical area established in large urban communities with the help of local specialists interested in urban and social science research. Census tracts are reviewed and approved by Statistics Canada according to the following criteria:

- (a) the boundaries must follow permanent and easily recognized lines on the ground;
- (b) the population must be between 2,500 and 8,000, with a preferred average of 4,000 persons, except for census tracts in the central business district, major industrial zones, or in peripheral rural or urban areas that may have either a lower or higher population;
- (c) the area must be as homogeneous as possible in terms of economic status and social living conditions; and
- (d) the shape must be as compact as possible.

All census metropolitan areas and all census agglomerations with a census subdivision having a population of 50,000 or more at the previous census are eligible for a census tract program. Once an urban centre is added to the program, it is retained even if its population subsequently declines.

While census tract boundaries do not necessarily respect census subdivision boundaries, they do respect the boundaries of census metropolitan areas and census agglomerations and their constituent primary census metropolitan areas and primary census agglomerations.

DWELLING, COLLECTIVE

Refers to a dwelling of a commercial, institutional or communal nature. It may be identified by a sign on the premises or by a Census Representative speaking with the person in charge or with a resident or a neighbour, etc. Included are rooming- or lodging-houses, hotels, motels, tourist homes, nursing homes, hospitals, staff residences, communal quarters of military camps, work camps, jails, missions, group homes, and so on. Collective dwellings may be occupied by usual residents or solely by foreign and/or temporary residents.

DWELLING, OCCUPIED PRIVATE

Refers to a private dwelling in which a person or group of persons is permanently residing. Also included are private dwellings whose usual residents are temporarily absent on Census Day. Unless otherwise specified, all data on dwellings are for occupied private dwellings rather than unoccupied private dwellings or dwellings occupied solely by foreign and/or temporary residents.

DWELLING, PRIVATE

Refers to a separate set of living quarters with a private entrance either from outside or from a common hall, lobby, vestibule or stairway inside the building. The entrance to the dwelling must be one which can be used without passing through the living quarters of someone else.

DWELLING, PRIVATE, OCCUPIED BY FOREIGN AND/OR TEMPORARY RESIDENTS

Refers to a private dwelling occupied solely by foreign and/or temporary residents on Census Day. A temporary resident of a dwelling is a person who resides there on Census Day, but has a usual place of residence elsewhere in Canada. A foreign resident is a person whose usual place of residence is outside Canada.

ENUMERATION AREA (EA)

Refers to the area usually canvassed by one Census Representative. It is defined according to the following criteria: (1) Households – the number of households in an enumeration area generally varies between a maximum of 375 households in large urban areas to a minimum of 125 in rural areas; (2) Limits – an enumeration area, being the building block of all geostatistical areas, never cuts across any geographic area recognized by the census. Moreover, enumeration area boundaries are defined such that the Census Representative will be able to locate them with as little difficulty as possible, for example, streets, roads, railways, rivers and lakes. Enumeration areas are normally the smallest geographic unit for which census data are available.

FEDERAL ELECTORAL DISTRICT (FED)

Refers to any territorial unit entitled to return a member to serve in the House of Commons. There are 282 FEDs in Canada based on the 1976 Representation Order. These FEDs are used both to present data and to organize census-taking.

INDIAN RESERVE

Refers to land that has been set apart for the use and benefit of an Indian band and that is subject to the terms of the Indian Act. Indian reserves are

classified as census subdivisions (CSDs) by Statistics Canada.

INDIAN SETTLEMENT

Refers to places, identified by the Federal Department of Indian and Northern Affairs Canada (INAC) for statistical purposes only, where a self-contained group of at least 10 Indian people reside more or less permanently. Indian settlements are usually located on Crown lands under federal or provincial jurisdiction. They have not been set apart for the use and benefit of an Indian band as is the case with Indian reserves.

PROVINCE

Refers to the major political division of Canada. From a statistical point of view, it is a basic unit for which data are tabulated and cross-classified. In census publications, separate provincial tables are provided for the Yukon Territory and the Northwest Territories.

DATA QUALITY

GENERAL

The 1986 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process from the preparation of materials, through the listing of dwellings and data collection to processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic

errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of errors are as follows:

- **coverage errors**, which occur when dwellings and/or individuals are missed, incorrectly included or double counted;
- **non-response errors**, which result from the fact that responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reason;
- **response errors**, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response;
- **processing errors**, which can occur at various steps including: **data capture**, when responses are transferred from the census questionnaire to computer tapes by key-punch operators; **coding**, when "write-in" or verbal responses are transformed into numerical codes by clerks; and **imputation**, when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);
- **sampling errors**, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

COVERAGE ERRORS

Since the data contained in this set of tabulations do not involve the supplementary questions on the "long form", they are not subject to any sampling error. Of the non-sampling errors described above,

by far the most important as far as population and dwelling counts are concerned are coverage errors.

The population and dwelling counts, while final, are still subject to some degree of error resulting from dwellings or persons being missed, incorrectly included in the census or double counted.

Missed dwellings or persons result in **undercoverage**. Dwellings can be missed because of misunderstanding of Enumeration Area (EA) boundaries, or because dwellings are hidden or appear uninhabitable. Persons can be missed because their dwelling is missed or classified as vacant or because household members temporarily away from the dwelling are omitted. Some individuals may be missed because they have no usual residence and did not spend census night in any dwelling.

Dwellings or persons that are incorrectly included or double counted result in **overcoverage**. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately, instead of being treated as part of a larger dwelling. Double counting of dwellings can occur, for example, because of ambiguity over EA boundaries. Persons can be double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally someone who is not a Canadian resident may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

In 1986, four studies were undertaken to measure different aspects of coverage error. First, a sample of dwellings listed as vacant was revisited to verify that they really were vacant on Census Day. Adjustments have been made to the final census counts for households missed because their dwelling was incorrectly classified as vacant. Secondly, a sample of persons enumerated as temporary residents was selected to verify whether or not they were enumerated at their usual place of residence. Again, adjustments have been made to final census counts to compensate for persons missed because they were temporarily absent from their usual place of residence. Despite these adjustments, the final counts are still subject to some undercoverage. For Canada as a whole and for each province, the magnitude of this residual undercoverage in the 1986 Census is being measured by means of a special study known as the Reverse Record Check. The results of this study were not available at the time this set of tabula-

tions was produced, but similar studies conducted during previous censuses indicate an overall undercoverage rate of approximately 2% for both persons and households. Undercoverage tends to be higher for certain segments of the population such as young adult males and recent immigrants. Undercoverage is offset to some degree by overcoverage errors, and in 1986, for the first time, a special study is being carried out to investigate overcoverage errors. Again, results were not available at the time this set of tabulations was produced.

For further information on coverage and other errors in census data, contact Social Survey Methods Division at Statistics Canada, Ottawa, Canada K1A 0T6 (613) 991-6932.

SPECIAL NOTES

INCOMPLETELY ENUMERATED INDIAN RESERVES AND INDIAN SETTLEMENTS

On some Indian reserves and Indian settlements in the 1986 Census, enumeration was not permitted or was interrupted before it could be completed. Certain Indian reserves and settlements are therefore footnoted in the tables as being incompletely enumerated.

Data for 1986 are not available for the incompletely enumerated reserves and settlements and are not included in subprovincial aggregations. Therefore, data for geographic areas containing one or more of these reserves or settlements are footnoted accordingly. Because of the missing data, users are cautioned that for affected geographic areas, comparisons (e.g., percentage change) between 1981 and 1986 are not exact. While for higher level geographic areas (Canada, provinces, census metropolitan areas and census agglomerations) the impact of the missing data is very small, the impact can increase for smaller areas containing a larger proportion of affected reserves and settlements.

While it is not possible to estimate the population of each incompletely enumerated reserve, the 1986 Census numbers at the provincial level, for both population and occupied private dwellings, include estimates made for the total number of incompletely enumerated Indian reserves and settlements. (See Appendix 1.)

It should be noted that for all tables that show data for subprovincial areas, the totals shown for 1986 for Canada and the provinces are the sums of the 1986 Census counts for the subprovincial areas and therefore do not include the estimates of the missed population and dwellings.

A list of incompletely enumerated Indian reserves and Indian settlements is shown in Appendix 2 together with the province, census division and, where applicable, the census metropolitan area or census agglomeration (CMA/CA) in which each is located.

POPULATION COUNTS BASED ON USUAL RESIDENCE

The population counts shown here for a particular area represent the number of Canadians whose usual place of residence is in that area, regardless of where they happened to be on Census Day. Also included are any Canadians staying in a dwelling in that area on Census Day and having no usual place of residence elsewhere in Canada. In most areas, there is little difference between the number of usual residents and the number of people staying in the area on Census Day. For certain places, however, such as tourist or vacation areas, or those including large work camps, the number of people staying in the area at any particular time could significantly exceed the number of usual residents shown here.

GEOGRAPHIC REFERENCE DATE

All data reported for census subdivisions are based on the boundaries in effect on January 1, 1986 provided that the information and documentation regarding these boundaries were in the hands of Statistics Canada by March 1, 1986. Where information was not received or was received after March 1, 1986, the name, status and/or limits of census subdivisions may not correspond to those recognized by provincial authorities.

1981 CENSUS POPULATION COUNTS

Population counts from the 1981 Census are reported in this set of tabulations for purposes of historical comparison. These 1981 counts have been adjusted, in those cases where population has been affected by the annexation or loss of land through the change of municipal boundaries, so as to reflect the January 1, 1986 boundaries upon which the 1986 Census is based. Detailed descriptions of such changes may be found in the two publications **Changes to Municipal Boundaries, Status and Names** (Catalogue No. 12-201, annual), and **Standard Geographical Classification, 1986, Volume III** (Catalogue No. 12-557, occasional).

Following the 1981 Census, some errors were detected in population counts reported. Where this occurred, the 1981 counts reported in this set of tabulations have been adjusted accordingly. Users wishing additional information in this regard should contact Geography Division, Statistics Canada, Ottawa, Canada K1A 0T6 (613) 990-9538.

1986 CENSUS DWELLING COUNTS

The dwelling counts in this set of tabulations refer to all private dwellings in Canada occupied by their usual residents, and by temporary and/or foreign residents. The population counts refer to residents of Canada, living as usual residents in private or collective dwellings, and they exclude foreign residents living in Canada. Because of these differences, users are cautioned to make appropriate allowances for foreign residents and for residents of collective dwellings when comparing dwelling counts with the population occupying the dwellings.

SYMBOLS

The following standard symbols are used in Statistics Canada releases:

- .. figures not available
- ... figures not appropriate or not applicable
- nil or zero
- amount too small to be expressed

REFERENCE PRODUCTS

Users, who may require assistance in understanding and interpreting the data and geographic concepts appearing in this set of tabulations, should refer to the **1986 Census Dictionary** (Catalogue No. 99-101E or F). The **Dictionary** provides a range of definitions for all variables and terms used in 1986 Census data products.

Maps showing the names, boundaries and location of geographic areas appearing in this set of tabulations are shown in two **Reference Map** publications (Catalogue Nos. 99-115 and 99-116).

Further details on the products and services available from the census are provided in the **1986 Census Products and Services – Preliminary Edition** (Catalogue No. 99-102E or F). A more

comprehensive description of products will be produced in early 1988 in the **1986 Census Products and Services - Final Edition** (Catalogue No. 99-103E or F).

Results from data collected from 100% of all households such as age, sex, family composition

and households will be released in July 1987. All users wishing to obtain more information about the range of census products available to serve their needs are invited to contact their nearest Statistics Canada Regional Office. They will be glad to help. Addresses and phone numbers are listed on the last page.
